CREATING AN ARMY WITH THE MORTEM ET GLORIAM ARMY LISTS

Use the army lists to create your own customised armies using the Mortem et Gloriam Army Builder.

There are few **general rules** to follow:

1. An army must have at least 2 generals and can have no more than 4.
2. You must take at least the minimum of any troops noted and may not go beyond the maximum of any.
3. No army may have more than two generals who are Talented or better.
4. Unless specified otherwise, all elements in a UG must be classified identically. Unless specified otherwise, if an optional characteristic is taken, it must be taken by all the elements in the UG for which that optional characteristic is available.
5. Any UGs can be downgraded by one quality grade and/or by one shooting skill (Skilled to Experienced or Experienced to Unskilled) representing less strong, tired, or understrength troops. If any bases are downgraded all in the UG must be downgraded. So Average-Experienced skirmishers can always be downgraded to Poor-Unskilled.
6. Points are shown for troops with all mandatory characteristics applied. Points have been rounded to the nearest whole number. If quality or shooting skill is downgraded, then the points (including the points for any optional characteristics) will need to be adjusted.
7. An army entirely of Cavalry, Chariots, Camelry or Infantry with the Dismountable characteristic may choose the No Camp option.

Where **allies** are allowed, they must conform to the following rules:

1. An ally must be a minimum of 2 and a maximum of 4 UGs.
2. They must take enough UGs to get them to at least 50% of the minimums in the list being used.
3. They can thereafter take any troops up to the maximum to create the rest of the allied contingent.
4. Unless specified in the notes, the general must be the same type as the army commander in their own army's list but cannot be legendary.

Usually this results in 1-3 UGs being compulsory and you having full flexibility on the rest.

Where an **internal ally** is allowed, and no contingent is specified they must conform to the following rules:

1. Each internal ally must be a minimum of 2 and a maximum of 4 UGs.
2. The total number of troops taken of each type in the entire army must not exceed the maxima for that troop type.
3. They must take enough UGs to get them to at least 50% of the minimums in the list if there is enough allowance for a UG after the core army itself has taken the minimum. For example: An army has 4-12 cavalry (UG size 4,6) and 18-32 spearmen (UG size 6,8,9) as compulsory troops with 2 internal allies. The core army must take 4 cavalry and at least 18 spearmen. The first ally must take 4 cavalry and at least 9 spearmen. The second ally must take 4 cavalry but cannot take the 9 spearmen as this would exceed the 32 spearmen limit for the army.

4. If a list requires a proportion of a troop type to be upgraded or regraded, then the army as a whole must comply with this requirement. Internal allies do not have to comply these requirements. For example: $\frac{1}{4}$ to $\frac{3}{4}$ of Turcomans must be upgraded from Experienced to Skilled shooting. An internal ally might have all Experienced as long as the army as a whole has $\frac{1}{4}$ to $\frac{3}{4}$ Skilled.
5. They can thereafter take any troops up to the maximum to create the rest of the allied contingent.

Usually this results in 1-3 UGs being compulsory and you having full flexibility on the rest.

As a courtesy to your opponent when you deploy your troops, you should describe each UG fully; type, training, quality, protection, melee weaponry, shooting skill and weaponry and characteristics. You should also explain how any unusual troop types in your army function and any special rules including Stakes, Caltrops, Barricades and Obstacles and troop types such as Battle Wagons.

The easiest way to calculate points is to use the downloadable on-line army builder at www.mortem-et-gloriam.co.uk. Use this and all you do is use drop downs for the troop classifications and it does all the work for you. For those who prefer pen and paper, or who want to doodle some approximate designs before loading an army up, we have provided the points values with the lists. If a discrepancy exists in the points values between these lists and the army builder, then the army builder has the correct value.

FRIENDLY AND SCENARIO GAMES

Feel free to vary the troop classifications for friendly and scenario games. An interesting aspect of scenario games can be to see what the effect is from representing troops in a different manner.

HISTORICAL INTRODUCTION

At the start of the 5th century BCE Italy was dominated by several different groups. The Celts were expanding from Gaul and Germany and coming into contact with the Etruscans in northern Italy. South of the Etruscans were the Latin tribes and amongst them an insignificant city called Rome. In the south of Italy the Greeks had founded a number of cities along the coast. Running through the spine of Italy were various tribes including Oscans and tribes which shared their heritage with Illyrians on the other side of the Adriatic.

The Celtic invasions of northern Italy led to the ultimate collapse of the Etruscan civilisation. In around 390 BCE the Gauls sacked Rome. The city survived and from this point on started a process that ultimately would lead to the Roman Empire. The Romans were a military state and all citizens were obliged to perform military service. Uniquely the Romans would offer a form of citizenship to many of the cities and nations that they would conquer. This led to a vast increase in manpower available for military service. During the 4th century BCE Rome expanded, absorbed both Etruria and the Latin tribes and fought three bitter wars against the Samnites.

In 282 BCE the Greek city of Tarentum, alarmed by Roman expansion, invited Pyrrhus of Epirus to lead their war against Rome. This was the first contact by Rome against the successors of Alexander the Great and the first contact with elephants. In three brutal but indecisive battles (leading to the term Pyrrhic victory) the Romans fought this new opponent. Losing interest, Pyrrhus sought other opportunities and Rome quickly came to dominate southern Italy.

As the 3rd century BCE progressed the Romans came increasingly into conflict with the Celts of northern Italy. In 218 BCE a new opponent appeared as Hannibal led his Carthaginian army over the Alps. In his first few years in Italy, he won three dramatic victories—the Trebia, Lake Trasimene, and Cannae and won over many allies of Rome. Hannibal was however unable to take Rome itself and the Romans used scorched earth tactics, refused battle and gradually wore down the Carthaginians. Carthaginian attempts to reinforce Hannibal were intercepted and defeated. Rome beat the Carthaginians in Spain and invaded Africa. The Carthaginian defeat at Zama signalled the end of the Carthaginian threat to Italy.

During the 2nd century BCE Rome expanded into Greece, Macedon and Asia Minor. The sacking of both Carthage and Corinth in 146 BCE demonstrated Rome was the most powerful state in the Mediterranean. The expansion in the Mediterranean drove divisions between Rome and her allies in Italy. The Italians demanded equal treatment with Roman citizens, united and formed a state, Italia. The Social War (from *socii*, the term for “allies”) was fought between 90 and 88 BCE Rome quickly offered citizenship to undermine the revolt and from this point on Italy can first be regarded as a unified state.

The expansion of Rome led to wealthy landowners obtaining vast numbers of slaves to man their farms and mines. The escape of a small group of gladiators led to a slave revolt that devastated large parts of Italy. The initial Roman response was inadequate, and the arms of the defeated forces only helped to equip the slaves. It would require an army of eight legions to defeat Spartacus and end the slave revolt.

From this point for nearly 400 years the threats to Italy were to come from Roman civil wars. The key to power was military control. First Sulla, then Julius Caesar ruled Rome through military conquest. Caesar's adopted great-nephew, Octavian, won power after defeating Antony and Cleopatra and converted the Republic into an Empire around 25 BCE.

The year of the four Emperors, 69 CE, saw the next threat of civil war in Italy. Vespasian emerged the ultimate victor and a period of relative stability followed. Roman expansion was intermittent, and with the conquest of Britain (started in 46 CE) and Dacia (101 to 106 CE) the Roman empire reached its largest extent.

In 192 CE, with the assassination of Commodus, the period of stability ended. Things went from bad to worse and the period 235 to 284 CE saw at least 26 claimants to be emperor. This ended with the reign of Diocletian. He introduced reforms that led to the division of the empire into Eastern and Western portions.

In 306 CE, Constantine the Great was declared emperor by his troops on the death of his father. He defeated his opponents and was to rule until 337 CE. He put an end to the persecution of Christians and established a second capital at Constantinople.

Theodosius was the last Emperor who ruled over the whole Empire. After his death in 395 CE the Roman state would continue to have two different emperors with different seats of power. Rome had already come under pressure from Goths and Germans. Triggered by the migration of the Huns, the borders of the Empire were collapsing. Italy was invaded, and Rome was sacked in 410 CE and again in 455 CE. The Emperor's seat was moved to Ravenna. The deposition of the emperor, Romulus Augustulus, in 476 CE by Odoacer, is generally accepted to mark the end of the Roman empire in the west.

MAXIMUS ARMY LISTS

CALCULATING POINTS

Army points are calculated as follows:

GENERALS - MAXIMUS

Type of general	Army Commander		Sub-general		Ally general	
	Professional	Instinctive	Professional	Instinctive	Professional	Instinctive
Legendary	1600	1400	n/a	n/a	800	700
Talented	1100	900	850	700	650	600
Competent	700	550	600	450	300	250
Mediocre	250	0	400	250	100	50

CAMPS

Type of camp	Poor	Average	Superior
Unfortified	108	180	252
Fortified	216	360	504
Flexible	180	300	420
Mobile	126	210	294
No camp	378	N/A	N/A

A flexible camp is deployed as a fortified camp when defending and a mobile camp when invading.
No camp deploys a poor mobile camp when defending and no camp at all when invading.

UGs

For each UG multiply the cost shown in the list (adjusting for any optional characteristics) by the number of bases.

NOTES

1. Points values for skirmishers in Magna and Pacto are greater than in Maximus as SuGs shoot at full effect with only two ranks.
2. For further details on how points are calculated visit the Mortem et Gloriam website.

EARLY ROMAN OR LATIN

600 TO 330 BCE

HISTORICAL NOTES

This list includes both Roman and Latin armies. Early Rome was dominated by the Etruscans. After the Etruscans failed to re-establish the monarchy in Rome (traditionally overthrown in 509 BCE) Rome established its primacy in Latium. In the early 4th century Rome captured the Etruscan city of Veii and subjugated the Volsci and Aequi. In 387 BCE Rome was sacked by a Gallic army under Brennos but they were subsequently driven off by M Furius Camillus. Following the First Samnite War (343 BCE to 341 BCE) the Latins revolted. The Latin War (340 BCE to 338 BCE) saw the Latin League dissolved, increased control by Rome and the Latins being granted some rights and varying degrees of citizenship.

TROOP NOTES

Cavalry: Early Roman cavalry seem to have been armed only with a thrusting spear.

Infantry: The system of classes of infantry divided by wealth seems to have been inherited from the Etruscans.

HISTORICAL ENEMIES

Lowland Gallic 2302; Early Roman or Latin 2501; Italian Hill Tribes 2502; Etruscan 2503; Umbrian 2504; Magna Graecia 2505.

RULERS

Rome's early records were destroyed in 390 BCE when the city was sacked. The list of kings may be at least partly a later Republican Roman invention.

Romulus (Titius Tatius, king of the Sabines joint ruler for several years)	753 – 716 BCE
Numa Pompilius	715 – 672
Tullus Hostilius	672 – 640
Ancus Marcius	640 – 616
Lucius Tarquinius Priscus	616 – 578
Servius Tullius	578 – 534
Lucius Tarquinius Superbus	534 – 509

In 509 the monarchy was overthrown and Rome became a republic, electing two consuls each year. In case of emergencies a sole dictator could be appointed.

BATTLES AND CAMPAIGNS

Battle of the Lacus Curtius (battle against the Sabines)	Reign of Romulus
War with Fidenae and Veii	Reign of Romulus
Second War with Fidenae and Veii	Reign of Tullus Hostilius

ITALIAN HILL TRIBES

600 TO 290 BCE

HISTORICAL NOTES

Central Italy was controlled by different tribes including the Aequi, Aurunci, Hernici, Picentes, Sabines, Sidicini and Volsci. They were conquered by Rome between the 5th century BCE and 3rd century BCE.

TROOP NOTES

Cavalry: The Italian Hill Tribes had a small amount of cavalry.
Infantry: The core of the army was javelinmen equipped with a shield and javelins. The wealthiest individuals might acquire some armour.

ETRUSCAN

600 TO 280 BCE

HISTORICAL NOTES

The Etruscan League was established in the 7th century BCE. It expanded from modern Tuscany into the Po valley, Latium and Campania. In the 6th century BCE, they were allied with Carthage against the Greek cities in Italy (Magna Graecia). In 474 BCE the combined fleets of the Syracusans and Cumae defeated the Etruscan fleet and the Etruscans lost control of the Tyrrhenian Sea. This led to their decline at the hands of the Romans and the Gauls. Around 282 BCE an army of Etruscans and Gauls was decisively beaten near Lake Vadimo by the Romans. Thereafter the Etruscans came firmly under Roman control.

TROOP NOTES

Cavalry: Etruscan cavalry seem to have been armed only with a thrusting spear.

Infantry of the 1st class: The Etruscans had adopted Hoplite panoply from the Greeks. The 1st class (wealthiest individuals) could possess the full panoply.

Infantry of the 2nd, 3rd class: These were less well equipped than the 1st class.

Infantry of the 4th class: There is debate whether these were less well-equipped spearmen or skirmishers.

Infantry of the 5th class: These were skirmishers. Some may have been slingers, the remainder were javelinmen.

Reclassifying the infantry with pilum is based upon the idea that the Roman system described in Livy and Dionysius was developed from the Etruscan system. These sources date from the 1st century BCE when the Roman tactical paradigm had already changed. It may have been developed from fighting the Gauls.

UMBRIAN

540 TO 290 BCE

HISTORICAL NOTES

The Umbrians were driven into the Apennines by the Etruscans. After the downfall of the Etruscans, Umbrians aided the Samnites in their struggle against Rome. When Rome fought the Gauls in 295 BCE, allied Umbrians and Etruscans had to return to their territories to defend against simultaneous Roman attacks. They were unable to help the Samnites and their Gallic allies in the battle of Sentinum. The Roman victory at Sentinum started a period of integration under Rome.

TROOP NOTES

Little evidence exists for the Umbrian army, but it may have been a mix of Latin and Oscan influences.

MAGNA GRAECIA

540 TO 267 BCE

HISTORICAL NOTES

Magna Graecia was the name given by the Romans to the coastal areas of Southern Italy in the present-day regions of Campania, Apulia, Basilicata, Calabria, and Sicily that were extensively populated by Greek settlers. It included over 25 cities including Capua, Neapolis, Tarentum, Thurii and Rhegium. Most of the cities fell either to Oscan or Roman control during the 4th and 3rd centuries BCE. The last cities were captured after the Pyrrhic War including Tarentum in 272 BCE. This list excludes the armies led by Pyrrhus against the Romans.

TROOP NOTES

The cities fought in typical Greek style. Italian mercenaries were readily available.
"Tarentine" cavalry were equipped with shields and javelins.

EARLY CAMPANIAN

500 TO 264 BCE

HISTORICAL NOTES

This list can cover Campanian armies to 275 BCE and the Mamertines from 284 to 264 BCE. The Campani, an Oscan people, gained control of the Greek and Etruscan cities of the northern Campanian plain. In 343 BCE threatened by Samnite incursions the Campanians invited Roman intervention, resulting in the first Samnite war. When a peace treaty threatened to carve up Italy between the Romans and Samnites, many Campanians joined the Latins in revolting against Rome. At the end of the war the Campanians were granted Roman citizenship without voting rights. In 327 BCE the Campanians once again sought Roman aid after the Samnites established a garrison at Neapolis. This led to the Second Samnite War. Thereafter Campania remained loyal to Rome until the Second Punic War. The Mamertines were a group of Campanian mercenaries who captured Messina and were named after the Oscan war god Mamers. The conflict between Syracuse and the Mamertines escalated into the First Punic War.

TROOP NOTES

Cavalry: The Campanians had some of the best cavalry in Italy.
Hoplites: The Campanians adopted hoplite panoply and tactics from their Greek subjects and neighbours.
Javelinmen: The Campanians could also draw on infantry using traditional Oscan tactics.

HISTORICAL ENEMIES

APULIAN

500 TO 203 BCE

HISTORICAL NOTES

Apulia in south-east Italy was occupied by tribes of mixed Illyrian and Oscan origin. Different tribes allied with both the Romans, the Samnites and with Pyrrhus.

TROOP NOTES

Cavalry: The Apulians had plenty of cavalry, many of whom were unarmoured. Shields were not carried before the 4th century BCE.

Javelinmen: The infantry were javelinmen. Round shields were carried. Some wore Greek style helmets. Armour was rare.

LUCANIAN

500 TO 203 BCE

HISTORICAL NOTES

The Lucanians were an Oscan tribe who conquered the areas of Italy south of Samnium. In 326 BCE a combined Lucanian and Bruttian army defeated and killed the army of Alexander of Epirus (grandfather of Pyrrhus). In 298 BCE they made alliance with Rome but on the landing of Pyrrhus in Italy (281 BCE) they were among the first to declare in his favour. After the departure of Pyrrhus, they were exposed to the resentment of Rome and reduced to subjection in 272 BCE Some Lucanians supported Hannibal during the Second Punic War.

TROOP NOTES

Cavalry: The Lucanians had less cavalry than the Apulians and proportionately more were armoured.
Javelinmen: The infantry were javelinmen. Round shields were carried. Armour is more common in images of Lucanian warriors.

SAMNITE

424 TO 272 BCE

HISTORICAL NOTES

The Samnites were an Oscan people living in south central Italy. They allied with Rome against the Gauls in 354 BCE, but later became enemies of the Romans and were soon involved in a series of three wars against the Romans. Despite a spectacular victory over the Romans at the Battle of the Caudine Forks (321 BCE), the Samnites were eventually subjugated. Although weakened, the Samnites later helped Pyrrhus and Hannibal in their wars against Rome.

TROOP NOTES

Cavalry: Samnite cavalry were similar to other Oscan cavalry. Livy records them throwing javelins.
Infantry: The Samnites operated units of picked troops, the best known being the Linen Legion.

Oscan allies added.

CAMILLAN ROMAN

400 TO 275 BCE

HISTORICAL NOTES

The development of the Republican Roman army is a controversial topic. This list represents an intermediate stage between the Etruscan system and the later system described by Polybius. The reforms are attributed to Camillus around 400 BCE but may date much later. Accordingly, Roman armies between 400 and 341 BCE may use either the Early Roman list or this list.

TROOP NOTES

Cavalry: Roman cavalry at this stage still seems to have been relatively ineffective.

Infantry: Sources for how Roman infantry fought before Polybius (Livy and Dionysius) are difficult to interpret. The classification assumes that the infantry were organised into three lines with Hastati, armed with throwing spears in the front line, Principes, armed with the Long Spear in the second line and Triarii armed with long spear in the third line. The Hastati could withdraw to leave the main fighting to be undertaken by the Principes. These in turn could be supported by the Triarii. This system and the pilum may have been developed from the Etruscans.

The Accensi were reserves.

Skirmishers: Leves, javelin armed skirmishers formed a quarter of each legion. Rorarii may have been additional skirmishers that could be called upon if required.

BRUTTIAN

356 TO 203 BCE

HISTORICAL NOTES

The Bruttii lived in the toe of Italy. They arose as a revolt of the former inhabitants against the Lucanians in the mid-4th century BCE. In 326 BCE a combined Lucanian and Bruttian army defeated and killed the army of Alexander of Epirus (grandfather of Pyrrhus). Around 300 BCE the Bruttii were attacked by Agathocles of Syracuse. They then allied with Pyrrhus and later Hannibal against the Romans.

HISTORICAL NOTES

This list reflects Campanian armies after the integration with Rome and that adopted Roman fighting techniques. The exact date is uncertain, hence the overlap with the Early Campanian list. In 216 BCE the Campanian city of Capua joined Hannibal. In contrast the city of Nola remained defiant. Capua fell to the Romans in 211 BCE after a long siege.

TROOP NOTES

Campanian troops adopted Roman fighting techniques and methods.

MID REPUBLICAN ROMAN

275 TO 100 BCE

HISTORICAL NOTES

This list reflects the Roman army described by Polybius. The reforms that led to the Polybian system appear to have started after the First Samnite War. During this period Rome conquered all of Italy. In the three Punic wars Rome destroyed Carthage and created a Roman province in Africa. It also created provinces in Spain and later in southern Gaul. At the end of the Punic war Rome became engaged in a war with Philip V of Macedon whom they defeated at the battle of Cynoscephalae in 197 BCE. Thereafter Rome was constantly invited to interfere in Greek affairs leading to wars with the Seleucid kingdom (defeated at Magnesia in 189 BCE), Macedon and Greece. In 146 BCE Greece and Macedon were incorporated as Roman provinces. The Attalid Kingdom of Pergamene was bequeathed to Rome and incorporated in 129 BCE. The Roman system of government, combined with the large manpower available to Rome, led to a continual series of aggressive wars.

TROOP NOTES

Elephants: The Romans captured elephants from the Carthaginians at Zama and then used them regularly in the east and occasionally in the west.

Cavalry: Roman cavalry improved compared to earlier times, possibly due to contact with Greek cavalry in the army of Pyrrhus. Numidian cavalry: Numidian cavalry were available to the Romans after Masinissa joined the Romans before Zama. Numidian cavalry were used regularly throughout the 2nd century BCE.

Hastati, principes and triarii: The principes changed from using a thrusting spear to the pilum. Only the triarii, retained the long spear.

Pedites Extraordinarii: Italian picked troops who were used to lead the army on the march, or if threatened from the rear might form the rear-guard. Italian infantry: Troops were obtained from Rome's Italian allies who hadn't converted to the manipular system. Spanish scutarii: Troops obtained from Spanish tribes friendly to Rome. Gallic foot: Rome was allied with various Gallic tribes from the middle of the 3rd century BCE although most Gallic tribes were hostile to Rome and fought a series of wars against Rome through this period. Illyrian foot: Rome was allied to various Illyrian tribes from the first expedition to Greece in 200 BCE. As with the Gauls, Rome also fought a series of wars against Illyrian tribes during this period. Thureophoroi: In the east Rome would use thureophoroi supplied by allied Greek states.

Light horse: Roman armies would obtain light horse from local allied states.

Velites: After 210 BCE the existing leves were replaced by velites. These were protected by larger shields and were much more prepared to fight and chase off other skirmishers.

Cretan archers: Cretan archers were available to armies in the east. Slingers: Slingers were recruited in both east and west. The Balearic Islands and Rhodes were particularly known for their slingers. Slingers also came from Tralles (in Asia Minor) and Syracuse.

LATER REPUBLICAN ROMAN

105 TO 20 BCE

HISTORICAL NOTES

This list reflects the Roman army of the 1st century BCE before the reforms of Augustus. Academic scholarship has largely debunked the idea of Marian reforms. The manipular system described by Polybius gradually disappears to be replaced by cohorts as the main tactical unit. A lack of sources makes it impossible to be sure when these changes occurred. The Social War from 91 to 88 BCE was fought between Rome and several Italian regions who allied together. The result led to the unification of Italy under Roman leadership. The wars of conquest from the previous century continued with Rome encountering Parthia, creating the Roman province of Syria and Caesar's conquest of Gaul. The closer ties between armies and their commanders starting with Sulla led to the civil wars which eventually led to Octavian becoming the first Roman emperor.

TROOP NOTES

Cavalry: The Romans relied increasingly on their allies for cavalry during this period. This included Spanish and Gallic cavalry in the west. Caesar also used German cavalry.

Legionaries: The manipular system was abandoned and replaced by cohorts. All legionaries were equipped with two pila, a lighter pilum which could be thrown and a heavier pilum that could be thrown or used as a thrusting spear. The main weapon was the Gladius.

Caesar's veterans: The loyalty of legionaries was now to their general rather than the state. Caesar's veterans, recruited for the Gallic wars, were by the time of the war with Pompey probably amongst the most experienced soldiers in the ancient world.

Spanish scutarii: Rome continued to obtain troops from friendly tribes in Spain.

Thracian foot: In the east Rome obtained troops from Thrace.

Archers: Archers were obtained from allied states in Syria.

Velites: Velites are last mentioned in 80 BCE. After this date, skirmishers were supplied by allied states or mercenaries.

Bolt Shooters: Caesar appears to have been one of the earlier Roman generals to adopt artillery in field situations.

SPARTACUS SLAVE REVOLT

73 TO 71 BCE

HISTORICAL NOTES

In 73 BCE Spartacus was amongst a group of 70 gladiators who broke out of a gladiatorial school. They defeated a series of Roman forces gathering more support and equipment each time. By the end of 73 BCE the force had collected up to 70,000 escaped slaves including woman and children. In 72 BCE they moved north, and although a smaller slave force under Crixus was defeated, the threat to Rome was such that several legions were hastily raised. Spartacus outmanoeuvred the Roman forces and defeated them in turn. At this point the slaves turned south. The Romans raised eight legions under M. Licinius Crassus. Two legions under Mummius were defeated but Crassus attached the main slave force and inflicted several thousand casualties. Unable to escape to Sicily, the slaves were penned into the toe of Italy. Short of supplies they made a desperate break out but were defeated in detail by Crassus in two further battles. Pompey returning from fighting in Spain with his forces captured and killed 5,000 slaves.

TROOP NOTES

Cavalry: The slave revolt army had a small amount of cavalry.
Infantry: The slaves started with gladiatorial equipment but captured Roman equipment from the early victories they inflicted on the hastily raised Roman forces that were initially sent against them. The rapid increase in numbers meant there was a shortage of arms. Many of the slaves were Gauls and Germans and a proportion would have been familiar with handling weapons. They are recorded as forming their own units. It is also possible that the slaves were joined by disaffected Samnites who had been defeated by Sulla in the Social War some 15 years earlier.

EARLY IMPERIAL ROMAN

20 BCE TO 268 CE

HISTORICAL NOTES

At some point after 30 BCE the emperor Augustus started to reform the Roman army. The core of the army remained the legions who were recruited from Roman citizens. The Auxilia were established to complement the legions. They were recruited from the peregrini or non-citizens of the empire. By the end of Augustus's reign, the imperial army consisted of about 250,000 men in 25 legions and approximately 250 units of auxilia. Except for the Praetorian Guard all legions were stationed on the frontiers of the empire. Apart from the conquests of Britain and Dacia the frontier remained largely unchanged. The main threats were the Germans and Sarmatians to the north and east of the Rhine and Danube and the Parthians to the east of Syria.

A period of increasing trouble and decline began with the reign of Commodus. Commodus' assassination in 192 triggered the Year of the Five Emperors, of which Septimius Severus emerged victorious. The assassination of Alexander Severus in 235 CE led to the Crisis of the Third Century in which 26 men were declared emperor by the Roman Senate over a fifty-year period.

TROOP NOTES

Cavalry: Cavalry were supplied by the Auxilia. In the east, units of horse archers were raised. Cataphracts were apparently first adopted around 100 CE.

Infantry: The core of the army were the legions. All legionaries used pilum and sword as in late republican times, but lorica segmentata replaced the chain mail as body armour.

Auxiliary equipment was standardised using lighter spears or javelins instead of the pilum.

Units of auxiliary archers were raised, particularly in the east.

Note: SPECIAL RULE. Instead of being deployed separately, bolt shooters may be attached to a unit of legionaries. Add "Experienced-Bolt Shooters" shooting to the normal characteristics of one base of a legionary TuG, and use a ballistae base for this (e.g. 5 legionaries and 1 ballistae as a TuG of 6). Note that this base is still a legionary: an infantry base not an artillery base. A legionary TuG with integrated bolt shooters may not be downgraded to Poor. The TuG moves at BWg speeds (but may double move) and with any move the TuG may abandon the bolt shooters, in which case replace the artillery base with a normal legionary base and revert to infantry speeds for movement thereafter. A UG with artillery is missile-focused and will require a card to charge, but can abandon the artillery and charge at infantry speeds. This special rule should be explained to opponents as soon as the first TuG of this type is deployed.

IMPERIAL ROMAN

269 TO 395 CE

HISTORICAL NOTES

The assassination of Alexander Severus in 235 CE led to the Crisis of the Third Century in which 26 men were declared emperor by the Roman Senate over a fifty-year period. It was not until the reign of Diocletian (from 284) that the empire was fully stabilized with the introduction of the Tetrarchy, which saw four emperors rule the empire at once. This arrangement was ultimately unsuccessful, leading to a civil war that was finally ended by Constantine I, who defeated his rivals and became the sole ruler of the empire. Constantine subsequently shifted the capital to Byzantium, which was renamed "Constantinople" in his honour. It remained the capital of the east until its demise. In 357 CE the Emperor Julian defeated 30,000 Alamanni. In 378 CE Gothic rebels defeated and killed the Emperor Valens. The Empire fell under increasing pressure from Goths, Huns, and Alans.

TROOP NOTES

Alterations to the Roman army continued throughout the Empire. In the 260s the cavalry arm of the army may have been expanded. The Roman army was reformed by Constantine I. The main innovation was the creation of field armies in rear of the frontier defences. The field armies originally contained "palatina" units, but they were later joined by "comitatensis" units. Lighter throwing spears were introduced to supplement the pilum. The shorter gladius was replaced by the longer spatha.

	Skirmisher	Unprotected	Bolt Shooters					4	

Note: SPECIAL RULE. Instead of being deployed separately, bolt shooters may be attached to a unit of legionaries with impact weapon. Add "Experienced-Bolt Shooters" shooting to the normal characteristics of one base of a legionary TuG, and use a ballistae base for this (e.g. 5 legionaries and 1 ballistae as a TuG of 6). Note that this base is still a legionary: an infantry base not an artillery base. A legionary TuG with integrated bolt shooters may not be downgraded to Poor. The TuG moves at BWg speeds (but may double move) and with any move the TuG may abandon the bolt shooters, in which case replace the artillery base with a normal legionary base and revert to infantry speeds for movement thereafter. A UG with artillery is missile-focused and will require a card to charge, but can abandon the artillery and charge at infantry speeds. This special rule should be explained to opponents as soon as the first TuG of this type is deployed.

FOEDERATE ROMAN

396 TO 460 CE

HISTORICAL NOTES

Following the death of Theodosius I in 395 CE, the last emperor to rule a united Roman Empire, the dominion of the empire was gradually eroded by abuses of power, civil wars, barbarian migrations and invasions, military reforms, and economic depression. The Crossing of the Rhine in 405/6 brought large numbers of German and Alan barbarians into the Western Roman empire. Large parts of Gaul, Spain and Italy were subsequently occupied by "foederati". The Sack of Rome in 410 by the Visigoths weakened the western Empire. In 451 CE a battle was fought between a coalition led by the Roman general Flavius Aetius and the Visigothic king Theodoric I against the Huns and their vassals commanded by their king Attila. It was one of the last major military operations of the Western Roman Empire. Rome was sacked again in 455 CE by the Vandals who had seized North Africa.

TROOP NOTES

After the campaigns of Stilicho and Alaric for mastery of Italy (402 to 410 CE) the army that had been reformed by Diocletian and Constantine the Great changed. By the 420s Roman field armies had evolved into bands of mounted warriors owing their allegiance to powerful warlords. The many units of the Notitia Dignitatum (dated between 421 and 425 CE) were probably significantly understrength.

Cavalry: In the west the cavalry were largely influenced by the Goths. They continued to fight with javelins or spear. This changed during the period. Aetius, having spent time in the Hunnic court, appears to have favoured Huns. In the east, cavalry were influenced by Sarmatian and Persian tactics.

Infantry: The former legions and unarmoured auxilia palatina were replaced by a universal heavy infantryman with big shield, spear (thrown against foot but thrust against mounted), "Herulian" sword, javelin and darts organised in files of 16 (but typically fighting in files of 8).

Artillery: Although used from fortifications, there is no evidence for field artillery in this period.

**CHANGES FROM LAST VERSION**

Date restriction on bucellarii. Western armies limited to two allies. Date of Alan contingent. Removed Ostrogoth allies.

LATER FOEDERATE ROMAN

461 TO 490 CE

HISTORICAL NOTES

This list represents the Western Roman Empire until its demise to 470 in Spain and to 490 in Italy and Dalmatia. The Eastern Roman Empire has its own list. The loss of North Africa accelerated the Western Empire's decay, while the deposition of the emperor, Romulus Augustulus, in 476 by Odoacer, is generally accepted to mark the end of the empire in the west. The list also covers the period of Odoacer as “King of Italy” until he was besieged in Ravenna by the Ostrogoths. With senatorial support, he acknowledged Nepos as Emperor.

TROOP NOTES

Cavalry: The influence of the Huns led to more Roman cavalry adopting the bow.
Infantry: The quality of "Roman" infantry continued to decline with greater reliance on Foederate infantry.

ODOACER ROMAN

475 TO 476 CE

HISTORICAL NOTES

The only independent source for the Turcilingi is Jordanes. Odoacer is described as their king although he may have been a Scirian. The Turcilingi were joined with the Scirii, Rugii and Heruls under Odoacer who deposed the last western Roman emperor.

TROOP NOTES

The Turcilingi are associated with the Rugians in Roman service, so may have been similar.
