

*When I first accepted the commission of subduing Africa,
I depended much less on the numbers or upon the bravery of my troops,
than upon the friendly disposition of the natives,
and their immortal hatred to the Vandals.*

CREATING AN ARMY WITH THE MORTEM ET GLORIAM ARMY LISTS

Use the army lists to create your own customised armies using the Mortem et Gloriam Army Builder.

There are few **general rules** to follow:

1. An army must have at least 2 generals and can have no more than 4.
2. You must take at least the minimum of any troops noted and may not go beyond the maximum of any.
3. No army may have more than two generals who are Talented or better.
4. Unless specified otherwise, all elements in a UG must be classified identically. Unless specified otherwise, if an optional characteristic is taken, it must be taken by all the elements in the UG for which that optional characteristic is available.
5. Any UGs can be downgraded by one quality grade and/or by one shooting skill (Skilled to Experienced or Experienced to Unskilled) representing less strong, tired, or understrength troops. If any bases are downgraded all in the UG must be downgraded. So Average-Experienced skirmishers can always be downgraded to Poor-Unskilled.
6. Points are shown for troops with all mandatory characteristics applied. Points have been rounded to the nearest whole number. If quality or shooting skill is downgraded, then the points (including the points for any optional characteristics) will need to be adjusted.
7. An army entirely of Cavalry, Chariots, Camelry or Infantry with the Dismountable characteristic may choose the No Camp option.

Where **allies** are allowed, they must conform to the following rules:

1. An ally must be a minimum of 2 and a maximum of 4 UGs.
2. They must take enough UGs to get them to at least 50% of the minimums in the list being used.
3. They can thereafter take any troops up to the maximum to create the rest of the allied contingent.
4. Unless specified in the notes, the general must be the same type as the army commander in their own army's list but cannot be legendary.

Usually this results in 1-3 UGs being compulsory and you having full flexibility on the rest.

Where an **internal ally** is allowed, and no contingent is specified they must conform to the following rules:

1. Each internal ally must be a minimum of 2 and a maximum of 4 UGs.
2. The total number of troops taken of each type in the entire army must not exceed the maxima for that troop type.
3. They must take enough UGs to get them to at least 50% of the minimums in the list if there is enough allowance for a UG after the core army itself has taken the minimum. For example: An army has 4-12 cavalry (UG size 4,6) and 18-32 spearmen (UG size 6,8,9) as compulsory troops with 2 internal allies. The core army must take 4 cavalry and at least 18 spearmen. The first ally must take 4 cavalry and at least 9 spearmen. The second ally must take 4 cavalry but cannot take the 9 spearmen as this would exceed the 32 spearmen limit for the army.

4. If a list requires a proportion of a troop type to be upgraded or regraded, then the army as a whole must comply with this requirement. Internal allies do not have to comply these requirements. For example: $\frac{1}{4}$ to $\frac{3}{4}$ of Turcomans must be upgraded from Experienced to Skilled shooting. An internal ally might have all Experienced as long as the army as a whole has $\frac{1}{4}$ to $\frac{3}{4}$ Skilled.
5. They can thereafter take any troops up to the maximum to create the rest of the allied contingent.

Usually this results in 1-3 UGs being compulsory and you having full flexibility on the rest.

As a courtesy to your opponent when you deploy your troops, you should describe each UG fully; type, training, quality, protection, melee weaponry, shooting skill and weaponry and characteristics. You should also explain how any unusual troop types in your army function and any special rules including Stakes, Caltrops, Barricades and Obstacles and troop types such as Battle Wagons.

The easiest way to calculate points is to use the downloadable on-line army builder at www.mortem-et-gloriam.co.uk. Use this and all you do is use drop downs for the troop classifications and it does all the work for you. For those who prefer pen and paper, or who want to doodle some approximate designs before loading an army up, we have provided the points values with the lists. If a discrepancy exists in the points values between these lists and the army builder, then the army builder has the correct value.

FRIENDLY AND SCENARIO GAMES

Feel free to vary the troop classifications for friendly and scenario games. An interesting aspect of scenario games can be to see what the effect is from representing troops in a different manner.

HISTORICAL INTRODUCTION

The Byzantine Empire was the continuation of the Roman Empire in the East. Constantine I (r. 324-337) reorganised the empire and established his new capital at Byzantium which was renamed “Constantinople” in his honour. It remained the capital of the Eastern Roman Empire for over 1000 years. Theodosius I (r. 375-395) was the last emperor to rule both the eastern and western halves of the Roman Empire. The empire continued to use Latin until the reign of Heraclius (r. 610-641) when Greek was adopted for official use.

The 5th century saw the collapse of the Western Roman Empire as Britain was abandoned and then Gaul, Spain and Italy were overrun by various German and Gothic tribes. In 410 Rome was sacked. In 423 Aetius became Magister Militum. Although he never sought to become Emperor, backed by Hunnic troops and the Eastern court he was the most powerful figure in the Western Roman Empire for the next thirty years.

In 429 the Roman commander in North Africa, Boniface, invited the Vandals under King Geseric to cross over from modern Spain to Africa to aid him. Once there they could not be removed, and by 439 they had captured Carthage. The Vandal fleets pillaged the coasts of the western Mediterranean and in 455 Rome was sacked again.

In 444 the Huns were united under Attila. By 450 he had extorted huge sums from the Eastern Roman Empire. In 451 he invaded Gaul and was defeated by a combined force of barbarians settled within the Roman Empire led by Aetius. Attila invaded Italy in the following year but withdrew. He died a year later. Aetius was assassinated in 454.

In 468 the Eastern Empire assembled a large army to secure Italy and retake Africa. Geseric defeated this invasion force. In September 476, Odoacer forced the 16-year-old Romulus Augustus to abdicate and installed himself as ruler of Italy. By convention, this is the point at which the Western Roman Empire ended. In 488 Theodoric, king of the Ostrogoths, invaded Italy at the orders of the Eastern Emperor Zeno, founded an Ostrogothic kingdom at Ravenna and killed Odoacer in 491. Theodoric ruled Italy until his death in 526.

In 527, Justinian I, became the Eastern Roman emperor. Under his rule, the Byzantine Empire reached its greatest extent after reconquering much of the western Mediterranean coast including North Africa, Italy and Rome. Part of his success was due to his general, Flavius Belisarius. Belisarius fought against the Sassanid Persians. From 533-534 he commanded the Byzantine expedition which recaptured North Africa. Between 535 and 540 he fought the Ostrogothic Kingdom of Italy, capturing Rome and Ravenna. He was then recalled to fight against the Persians. After an indecisive campaign he returned to Italy but was starved of resources by Justinian. Justinian sent Narses to replace Belisarius who decisively defeated the Goths in 552 at Taginae. In 559 Belisarius was brought out of retirement to command against a Bulgar invasion that threatened Constantinople itself. Despite being severely outnumbered he defeated the Bulgars.

In 568 the Langobards (Lombards) invaded Italy, joined by numerous Saxons, Heruls, Gepids, Bulgars and Thuringians. By late 569 they had conquered all of northern Italy as well as occupying parts of central and Southern Italy. They established the Lombard Kingdom which although conquered by Charlemagne, continued to rule southern parts of Italy until the 11th century when they were conquered by the Normans.

During the 6th and 7th centuries a series of epidemics struck which devastated the population and contributed to a significant weakening of the Empire. After the death of Justinian in 568 the Empire was threatened by the Avars and Slavs crossing the Danube and the Persians in the east. In 602 the Sassanid Khosrau II invaded and quickly conquered the eastern provinces of the Empire including Mesopotamia, Syria, Palestine and Egypt. In 626 Constantinople was besieged by Avars and Slavs to the north and Persians from the South. The Emperor Heraclius adopted the strategy of sailing up the Black Sea and invading the Persian heartland. The Persians withdrew and Khosrau II was assassinated (628). The lost provinces were restored to the Empire, but most of the Balkans were lost to the Slavs.

From 634, the Arabs, newly united by Mohammed, invaded and conquered Syria, Palestine, Egypt and Mesopotamia. These provinces were never to be recaptured. The Arabs sent frequent raiding parties into Asia Minor. In the 670s the Bulgars were pushed south of the Danube by the arrival of the Khazars. Between 674 and 678 the Arabs laid siege to Constantinople itself. The Arabs were eventually repulsed and a thirty-year truce signed with the Umayyad Caliphate.

The 8th and 9th centuries saw a decline in urban culture. Only the accession of Basil I in 867, which marks the beginning of the Macedonian Dynasty, would see a revival and resurgence in the Empire. On the Eastern front the Empire rebuilt its defences and took the offensive against the Abbasid caliphate. Byzantine power in Southern Italy was consolidated and would remain in the Empire for the next 200 years. The 10th century saw slow but steady progress in Syria and the capture of Crete in 963 and Cyprus in 965.

In 894 the Bulgars invaded the Empire under Simeon I. In 896 the Byzantines were defeated at Boulgarophygon and agreed to pay annual subsidies. The Byzantines were defeated again in 917 and Constantinople faced another siege in 924. The sudden death of Simeon in 927 saw the collapse of the Bulgar threat. In 968 Bulgaria was overrun by the Rus, but they were defeated in 971 and Eastern Bulgaria re-incorporated into the Byzantine Empire. Bulgar revolts continued until the Bulgars were effectively annihilated at Kleidon in 1014. By 1018 the Empire had restored the Danube frontier which had not been held since the reign of the emperor Heraclius.

MAXIMUS ARMY LISTS

CALCULATING POINTS

Army points are calculated as follows:

GENERALS - MAXIMUS

Type of general	Army Commander		Sub-general		Ally general	
	Professional	Instinctive	Professional	Instinctive	Professional	Instinctive
Legendary	1600	1400	n/a	n/a	800	700
Talented	1100	900	850	700	650	600
Competent	700	550	600	450	300	250
Mediocre	250	0	400	250	100	50

CAMPS

Type of camp	Poor	Average	Superior
Unfortified	108	180	252
Fortified	216	360	504
Flexible	180	300	420
Mobile	126	210	294
No camp	378	N/A	N/A

A flexible camp is deployed as a fortified camp when defending and a mobile camp when invading.
No camp deploys a poor mobile camp when defending and no camp at all when invading.

UGs

For each UG multiply the cost shown in the list (adjusting for any optional characteristics) by the number of bases.

NOTES

1. Points values for skirmishers in Magna and Pacto are greater than in Maximus as SuGs shoot at full effect with only two ranks.
2. For further details on how points are calculated visit the Mortem et Gloriam website.

ROMANO-MOORISH KINGDOMS

428 TO 696 CE

HISTORICAL NOTES

Moorish kingdoms formed in the 3rd century when inland areas were taken over by Berber tribes and Roman rule confined to the coast. Independence was gained with the Vandal invasion of North Africa in 429 and maintained until the Byzantine conquest in 534. Fighting continued from 535 to 539 and 546 to 548. Some kingdoms then maintained their independence until conquered by the Arabs at the end of the 7th century.

TROOP NOTES

Light cavalry with javelins remained the core of Moorish and Berber armies of this period. Procopius describes how the Moors took shelter being a rampart of camels and fought on foot.

AFRICAN VANDAL

442 TO 535 CE

HISTORICAL NOTES

The Vandals under Geiseric with some Alans crossed to Africa in 429 CE at the request of Boniface (Bonifacius), the military ruler of the region. Procopius asserts that the Vandals and Alans numbered 80,000 when they moved to North Africa. They quickly fell out with Boniface and by 432 had captured Numidia, despite Boniface receiving reinforcements from both Western and Eastern Roman Empires. Geiseric went on to capture Carthage in 439. Conquering Sicily, Sardinia, Corsica, and the Balearic Islands, he built his kingdom into a powerful state. During the next thirty-five years, with a large fleet, Geiseric looted the coasts of the Eastern and Western Empires and in 455 sacked Rome. In 460 and 468 the Vandals defeated Roman expeditions attempting to recapture Rome.

In 533 the Byzantine Emperor Justinian I declared war and sent an expedition under Belisarius. The Vandals were defeated twice and by 534 had surrendered. The choicest Vandal warriors were formed into five cavalry regiments, known as Vandali Iustiniani, and stationed on the Persian frontier.

TROOP NOTES

Having conquered Africa, the Vandals switched to fighting mounted. Vandals would however fight on foot if raiding from ships.

SABIR

450 TO 582 CE

HISTORICAL NOTES

The Sabirs although referred to as ancient sources as Huns, were probably of Turkic descent and related to the Khazars. They lived north of the Caucasus, on the eastern shores of the Black Sea. They fought for both the Byzantines and Sassanid Persians at different times and were skilled in fighting on foot and in siege warfare. They are first mentioned by Priscus in 463 CE and last mentioned in connection with the Byzantine conquest in Caucasian Albania c. 580. They were probably assimilated into the Khazar or Bulgar confederations.

TROOP NOTES

Sabir are recorded as both fighting as horse archers and as having effective foot.

LANGOBARD

489 TO 584 CE

HISTORICAL NOTES

The first mention of the Langobards (Long Beards) is by Paterculus who says that under Tiberius the power of the Langobardi was broken, a race surpassing even the Germans in savagery. They survived during the next four centuries. In 489 CE it is believed they migrated from the shores of the Elbe to former territories of the Burgundi possibly on the Oder. In the 540s, Audoin (ruled 546 to 560) led the Langobards across the Danube into Pannonia, where they received imperial subsidies as Justinian encouraged them to battle the Gepids. In 552, the Byzantines aided by a large contingent of Foederati, notably Langobards, Heruls and Bulgars, defeated the last Ostrogoths led by Teia in the Battle of Taginae. Audoin was succeeded by his son Alboin. In 568 joined by numerous Saxons, Heruls, Gepids, Bulgars and Thuringians he invaded Italy. By late 569 they had conquered all of northern Italy as well as occupying parts of central and Southern Italy and established the Lombard Kingdom.

TROOP NOTES

The Langobards were largely fought as a mounted aristocracy with poorer free (or recently freed) men fighting on foot. Archers carried shields.

SASSANID PERSIAN

489 TO 628 CE

HISTORICAL NOTES

In 488 CE Kavadh I came to the throne. With the support of the Hephthalites he launched a campaign against the Byzantine Empire, but a peace treaty was negotiated in 506. In 525 an attempt by the Iberians to switch their allegiance led him to wage a second war. The Byzantines were repulsed at Nisibis (527) but then under Belisarius beat the Persians at Dara (530). A second Persian army was defeated at Satala but the Persians defeated Belisarius at Callinicum (531) and a further peace treaty was negotiated. In 540 Khosrau I, son of Kavadh, broke the treaty. After initial success, fighting concentrated on the region of Lazica, south of the Caucasus mountains by the Black Sea. A peace treaty in 562 recognised Lazica as part of the Byzantine sphere of influence. War again broke out when Armenia and Iberia revolted from Sassanid control in 571. After earlier successes, Khosrau was severely defeated outside Melitene (576). The Armenian revolt came to an end with Armenia back in the Sassanid Empire. War continued with the Byzantines until Khosrau II asked the Byzantine Emperor Maurice for assistance to defeat Bahram who had seized the throne. When restored to power Khosrau II handed control of western Armenia and Iberia to the Byzantines. When Maurice was overthrown Khosrau used this as a pretext for a new invasion. The Persians benefited from civil war in the Byzantine empire and conquered Syria in 611 and Egypt by 621. The Persians however were overstretched, and the Byzantine Emperor Heraclius led a successful counterattack between 622 and 627. Khosrau II was overthrown and murdered by his son Kavadh II in 628.

TROOP NOTES

By the late fifth century the Sassanid army was relying less on cataphract cavalry and also employing more Daylamite infantry.

DAYLAMITE

489 TO 899 CE

HISTORICAL NOTES

The highlands of Daylam were a mountainous region south of the Caspian Sea. During the Sassanian period, they were ruled by descendants of Gushnap, a Parthian vassal, who submitted to the Sassanid emperor Ardashir I. An elite unit of 4000 Dailami were employed by Khosrau II. Muslim sources maintain that following the Sassanid defeat at the Battle of al-Qadisiyyah the Dailami defected to the Arab side and converted to Islam. The Daylamites resisted the Arab invasion of their own homeland for several centuries under their own local rulers. The Abbasid Caliphate occupied parts of the region, but their control was never very effective. The reliance of the Abbasid Caliphate for mercenary soldiers and the conversion of the Daylamites to Islam led to local Arab dynasties including the Buyids and Ziyarids.

TROOP NOTES

Dailami were described by Agathias as "For they both discharge missiles from a distance when occasion arises and engage in hand to hand fighting, and they are expert at charging an enemy phalanx and breaking its close-knit ranks with the weight of their charge. Procopius says, "And they are all foot-soldiers, each man carrying a sword and shield and three javelins in his hand (De Bello Persico 8.14.3-9)."

Further evidence suggests the equipment of the Daylamites of the Sassanian army included swords, shield, battle-axe (tabar-zīn), slings, daggers, spears, and two-pronged javelins (zhūpīn)

ITALIAN OSTROGOTHIC

493 TO 561 CE

HISTORICAL NOTES

In 488 CE Theoderic and his Ostrogoths set out to invade Italy under an agreement with the Eastern Roman emperor Zeno. After 5 years of war, a peace treaty was arranged between Odoacer and Theoderic, but at a banquet to celebrate the treaty Theoderic killed Odoacer and a massacre of his supporters followed. Theoderic and his Goths were masters of Italy but retained the Roman system of administration. All military matters remained the exclusive preserve of the Goths who mostly settled in northern Italy and kept themselves distinct from the Roman population. In 506 Theoderic found himself at war with the Franks who had attacked the Visigothic dominions in Gaul. Through his successes he extended Ostrogothic rule into Provence at the expense of the Burgundians. In 535 the Byzantine emperor Justinian resolved to reclaim Italy. Between 535 and 554 a series of wars was fought between the Goths and Byzantines. In 540 the Byzantines captured Ravenna and held much of Italy, but the Goths continued to resist. By the end of the conflict Italy was devastated. Consequently, the Byzantines couldn't resist the invasion of the Lombards in 568.

TROOP NOTES

Theoderic tried to include the Roman aristocracy into his Italian kingdom but relied primarily on the forces he had led into Italy and the remnant forces of Odoacer. As these troops were given land largely taken from Roman nobles, this led to inevitable disputes and tensions. The troops would fight mounted but could dismount if required. Infantry included some Romans but was mainly used to garrison cities.

HISTORICAL NOTES

This list covers the period of Byzantine resurgence after the collapse of the western Roman empire.

Anastasius was acclaimed as Emperor in 491, overthrowing the Isaurian rule of Zeno. He was sixty years old when he came to the throne. The long established peace with Sassanid Persia collapsed when Khavad invaded in 502. The Persians quickly inflicted defeats on the Byzantines in 502 and 503 leading to a negotiated peace in favour of the Persians.

Justin became Emperor after the death of Anastasius. He took a much more aggressive stance against the Persians and this would lead to war.

Justin was succeeded by his nephew Justinian who had already been appointed Caesar two years earlier. Under Justinian and his general Belisarius, the Byzantine empire would be resurgent, taking Africa back from the Vandals. A long campaign against the Ostrogoths in Italy would result in Byzantine rule being established in Italy. The cost and damage caused by the war would however lead to the subsequent conquest of Italy by the Lombards.

TROOP NOTES

With the collapse of the Western Roman Empire, Eastern armies followed the existing trend of relying largely on cavalry although they could still field significant amounts of infantry if required.

Troops described as Huns could have originated from any of the steppe tribes that the Romans encountered.

MAURIKIAN BYZANTINE

575 TO 650 CE

HISTORICAL NOTES

The Byzantine emperor Maurikios codified current military practice in the Strategikon at the end of the 6th century CE. It excludes the armies of Heraklius that invaded Persia from 622 to 628 CE.

This period saw the Byzantines in an extended struggle against the Sassanid Persians. The cost to both sides resulted in the Arabs, motivated by a new religion, able to make extensive conquests from both great empires. For the Byzantines, this would result in the loss of Syria, Palestine, Egypt and Africa. On the Balkan front, the arrival of the Avars would lead to a collapse of the Danube frontier and most of the Balkans peninsula being occupied by Slavs.

TROOP NOTES

The cavalry mainly consisted of lancers supported by archers and adopted many items of equipment from the Avars, probably including the stirrup. Detached units of horse archers, koursoures, were often recruited from Avars or similar tribes. The infantry took on a more defensive role during this period. The Strategikon includes drills that follow earlier Roman combat traditions. Later skutatoi wore a mail or lamellar corslet, carried the oval skouta shield and were armed with a 12-to-14-foot spear called a kontarion, hence the option for long spear. Javelins or martiobarbuli (darts) were carried by the rear ranks and are classified as integral shooters.

ITALIAN LOMBARD

584 TO 774 CE

HISTORICAL NOTES

In 568 CE the Langobards (Lombards) invaded Italy joined by numerous Saxons, Heruls, Gepids, Bulgars and Thuringians. By late 569 they had conquered all northern Italy as well as occupying parts of central and Southern Italy. They established the Lombard Kingdom which although conquered by Charlemagne, continued to rule southern parts of Italy until the 11th century when they were conquered by the Normans. This list covers Italian Lombard armies until the conquest by Charlemagne.

TROOP NOTES

Lombard cavalry tactics evolved from earlier Gothic tactics. The cavalry typically formed in two lines. Archers could be recruited from all free Lombards.

HERAKLIAN BYZANTINE

622 TO 628 CE

HISTORICAL NOTES

This list represents the main Byzantine field army led by the emperor Heraklius in person during his daring and somewhat unconventional fightback against the, until then, all conquering Sasanid Persian armies of Khusrau II. Heraklius' strategy was based around taking the fight to the Persians by invading their territory. It is likely that his war aims were regime change rather than outright conquest which was probably impossible.

TROOP NOTES

The army was highly trained and mobile, consistently out-marching and out-manoeuving the Sassanids, often when threatened by encirclement by multiple enemy armies. Heraklius' victories were often gained after placing his opponents in a disadvantageous position rather than just by combat ability, although his army was more effective than most other Byzantine armies since the start of the war with Persia in 602 CE. Following the deposition of Khusrau II in 628 CE, Heraklius withdrew from Persian territory and his army appears to have been dispersed somewhat.

The composition of the army was no different from those which fought for Maurikios, Fokas and Heraklius himself in the earlier stages of the war. What was different was their greater degree of training and the army leadership. This is reflected by the Drilled classification for the regular troops, a higher number of Superior troops allowed, and a greater availability of Melee Expert as an optional characteristic.

There is no reference to the Optimates at this time, and as Heraklius extensively trained and equipped his troops as he wished it is possible that they were now the same as all other cavalry. However, a small number are still allowed in case they still existed.

In 624 and 625 CE Heraklius was joined by significant numbers of allies from the Caucasus, however, these appear to have operated within the armies command structure and so are not classified as allied contingents. They left the army late in 625 CE with Heraklius' agreement to defend their home territories.

"Khazar" allies appear to have been Gokturks, the term Khazar is an anachronistic use from a slightly later date when the Khazars were the major Turkic power with which Byzantium had relations.

EARLY SERBIAN

672 TO 1042 CE

HISTORICAL NOTES

The Serbs were Slavs who probably mixed with the indigenous population. They occupied an area comprising roughly to modern Serbia. This area had been subjected to raids throughout the early period of the Eastern Roman Empire and in 7th century CE small Serb states start to emerge. By the mid-10th century, the state had emerged as a tribal confederation ruled by the Vlastimirović dynasty. The tribes most likely consolidated due to the spreading of the Bulgarian Khanate towards their borders in the 9th century. The Bulgars were successfully resisted, and Serbia converted to Christianity. In the late 10th century Serbia was contested between the Byzantines and the Bulgars. It is independent again by 1042.

TROOP NOTES

The Serbs had some cavalry which probably imitated Gothic tactics, supported by tribesmen on foot.

EARLY CROATIAN

627 TO 1097 CE

HISTORICAL NOTES

The origin of the Croats is uncertain. They are recorded as being ruled by Carolingian Lothar I in 828 CE but agreed a peace treaty with Venice in 839. They also successfully resisted an invasion by the Bulgars. They also resisted both the Arabs and Byzantines and in the early 10th century united the Dalmatian and Pannonian Croats into a single state. Another invasion by the re-emergent Bulgars was defeated and better relations established with the Byzantines. Croatia was united with the Hungarian crown in the early 12th century.

TROOP NOTES

The Croats like other Slavic tribes combined nobles fighting mounted and warriors on foot. Croats were renowned for using axes.

SYRIAN BYZANTINE

629 TO 636 CE

HISTORICAL NOTES

This list covers Byzantine armies in Syria until the Battle of Yarmouk in 636 CE. After re-capturing Syria from the Sassanids, the emperor Heraclius focused on defending Northern Syria from the Persians (the traditional foes of the Byzantines). Unfortunately, the defences to the south were designed only to protect lines of communications from bandits. This enabled the Muslims, advancing from the desert to the south to reach Gaza before meeting regular Byzantine troops. Military confrontations began during the lifetime of the Prophet Muhammad. In September 629 the Byzantines and Ghassanid vassals routed a Muslim army near Mu'tah. The main phase of the conquest took place from 634. The decisive battle took place at Ajnadayn in July 634. Heraclius sent reinforcements but these were defeated. Heraclius started gathering a major army in late 635. In June 636 the force advanced from Antioch. The Muslims adopted a defensive position on the plain of Yarmouk. Over the course of six days the Byzantine army was completely routed. Heraclius abandoned Syria.

TROOP NOTES

The Byzantine troops in Syria were organised along the lines of Byzantine armies elsewhere but incorporated more local Arab cavalry.

LATE SASSANID PERSIAN

629 TO 654 CE

HISTORICAL NOTES

The death of Khosrau II led to chaos and civil war with six kings in five years. In 632 CE the first raids from Arab tribes, unified by Islam, occurred. The Sassanids never mounted a truly effective resistance to the pressure applied by the early Arab armies. In 636, a Muslim army defeated a larger Persian force at the plains of al-Qādisiyyah and advanced on Ctesiphon, which fell after a prolonged siege. The Arabs captured the vast Sassanid treasury. The Arabs gained another victory at the battle of Nihawānd. The Sassanid emperor fled to the eastern province of Khorasan but was killed in 651 and the Arab conquest of remaining Sassanid territory swiftly followed.

TROOP NOTES

Significant numbers of Armenians continued to serve with Sassanid armies even after the Roman conquest of Armenia in 627 CE.

RSHTUNI ARMENIAN

638 TO 775 CE

HISTORICAL NOTES

Theodoros Rshtuni was prince of Armenia from 638 to 655 CE and had the difficult task of ensuring Armenia's survival between Byzantine and Arab ambitions. The dynasty had ruled parts of Armenia since the 4th century. He defended, alongside the Byzantine general Procopius, against the first, unsuccessful, Arab attack into Armenia in 640. In 652 Rshtuni was able to negotiate a treaty that accepted Arab suzerainty but that left Armenia with a relatively high level of autonomy. In response the Byzantine emperor invaded Armenia. The Byzantines were initially successful but could not hold on to Armenia. Armenia remained independent but nominally under the Arabs until 700. A revolt in 703 was suppressed and in 705 Armenia incorporated into a larger Emirate called al-Arminiya. This list also includes the revolt by Armenian princes against the Arabs in 775.

TROOP NOTES

Armenian cavalry was influenced by Byzantine tactics. These were supported by horse archers. Infantry carried spears.

THEMATIC BYZANTINE

650 TO 929 CE

HISTORICAL NOTES

The Thematic system was introduced by the Emperor Heraclius after the empire had been overrun by Bulgars and Slavs in the north and Arabs from Syria. The empire was divided into provinces called Theme and run by a commander who combined both the military and civil role. Soldiers were given plots of land in return for part-time service and their descendants were expected to follow them. This both reduced the cost of the army and reduced the need for conscription.

TROOP NOTES

Thematic cavalymen were settled on agricultural plots, supplemented with payments in return for military service. The plots varied in the income they could provide leading to some cavalry being better equipped than others.

Regular cavalry troops based in Constantinople became the Tagmata.

Large numbers of foreign mercenaries and auxiliaries were employed in Byzantine armies.

DUCHY OF NAPLES

661 TO 1137 CE

HISTORICAL NOTES

In 661 CE the Byzantine Emperor Constans allowed the local duke Basil to rule Naples. It rapidly became an independent state. In the early 8th century it received help from the papacy against the Lombards and in 763 became a papal suzerain, switching allegiance from Constantinople to Rome. The duchy at this time was not hereditary and new appointees required imperial approval. This stopped in 821 when the imperial appointee was chased from the city. The duchy became hereditary after Duke Sergius I in 840. Naples declined in importance in the tenth century. In the 11th century Duke Sergius IV donated the county of Aversa to a band of Norman mercenaries. This began a process that would eventually lead to the end of Naples’ independence, but only after all the Lombard principalities and fellow Greek duchies had fallen first.

TROOP NOTES

Naples followed a Byzantine military tradition which was then influenced by the Lombards and later the Normans. Muslim troops were used on occasion.

LOMBARD PRINCIPALITIES

775 TO 1076 CE

HISTORICAL NOTES

After the conquest of the main Lombard kingdom by Charlemagne, Duke Arechis II of Benevento claimed that Benevento was the successor state of the kingdom. Charlemagne forced Arechis II to submit but he was for practical purposes independent. The Beneventan dukes took the title princeps (prince) instead of that of king. The Lombards of southern Italy were thereafter in the anomalous position of holding land claimed by two empires: the Carolingian Empire to the north and west and the Byzantine Empire to the east. Benevetan power grew until 839 CE when a civil war erupted. A peace enforced by East Frankish king Louis II divided the kingdom into two states: the Principality of Benevento and the Principality of Salerno.

The threat of the Arabs helped to unite the Lombards, Franks and Byzantines and in 915 the Arabs were ousted from Italy. During the 9th century Capua declared itself as a third Lombard principality but in 900 was united with Benevento. Apart from brief unification in 977, Salerno and Benevento remained divided. The Beneventan principality declined and fell under the control of the Papacy, while Salerno flourished briefly until shrinking and falling into the hands of the Norman, Richard Guiscard, in 1078.

TROOP NOTES

All free Lombards were obliged to perform military service. There were three categories, the richest obliged to serve on horse with shield, corselet, and lance. The next category was obliged to serve on horse with shield and lance. The poorest served as infantry with shield and bow.

BAGRATID ARMENIAN

885 TO 1045 CE

HISTORICAL NOTES

The Emirate of Armenia lasted until 884 CE, when the Bagratuni Ashot I, declared himself "King of the Armenians". He received recognition by Caliph Al-Mu'tamid of the Abbasid dynasty in 885 and Byzantine Emperor Basil I of the Macedonian dynasty in 886. In 892 the city of Dvin was captured from the Arabs, but this provoked the Arabs into attacking Armenia and weakened the Bagratid control. However, the longer-term decline of the Abbasid dynasty benefitted Armenia. In the 11th century the Byzantines started encroaching on Armenian territory. By 1045 the Byzantines were in control of the entire kingdom.

TROOP NOTES

After Arab rule, the Armenian armies remained cavalry armies led by nobles supported by horse archers and by infantry equipped with spears.

LATER THEMATIC BYZANTINE

930 TO 963 CE

HISTORICAL NOTES

This list is based on the instructions for the army laid down in the Sylloge Tacticorum which superseded those in the earlier Taktika of Leo VI. During this period the Byzantines started to undertake regular successful attacks on their Muslim enemies aided by the collapse of 'Abbasid power in the border areas.

TROOP NOTES

Menaulatoi appear to have been sent in a small body in front of the main line to blunt the charge of Kataphraktoi.
In the Sylloge Tacticorum, Prokoursatores are mainly archers with some lancers. They would take the fight to the enemy and then fall back on their supports if necessary.
Outflankers were bodies of mostly archers on the right and left flanks of the first line.

NIKEPHORIAN BYZANTINE

960 TO 1058 CE

HISTORICAL NOTES

During the late 9th and 10th centuries CE the Byzantine empire went on the offensive. By 1018 the Danube frontier was restored.

TROOP NOTES

In the Praecepta of Nikeforos Fokas, menaulatoi now appear as the front rank of a Skutatoi unit. Menaulatoi also were used to support light troops. The Kataphraktoi had changed from earlier times. They now carried iron maces, so are categorised as Short Spear, Melee Expert.
