4107	The Five Hegemons	685 to 591 BCE
4108	Late Spring and Autumn Chinese	591 to 475 BCE

CREATING AN ARMY WITH THE MORTEM ET GLORIAM ARMY LISTS

Use the army lists to create your own customised armies using the Mortem et Gloriam Army Builder.

There are few **general rules** to follow:

1. An army must have at least 2 generals and can have no more than 4.
2. You must take at least the minimum of any troops noted and may not go beyond the maximum of any.
3. No army may have more than two generals who are Talented or better.
4. Unless specified otherwise, all elements in a UG must be classified identically. Unless specified otherwise, if an optional characteristic is taken, it must be taken by all the elements in the UG for which that optional characteristic is available.
5. Any UGs can be downgraded by one quality grade and/or by one shooting skill (Skilled to Experienced or Experienced to Unskilled) representing less strong, tired, or understrength troops. If any bases are downgraded all in the UG must be downgraded. So Average-Experienced skirmishers can always be downgraded to Poor-Unskilled.
6. Points are shown for troops with all mandatory characteristics applied. Points have been rounded to the nearest whole number. If quality or shooting skill is downgraded, then the points (including the points for any optional characteristics) will need to be adjusted.
7. An army entirely of Cavalry, Chariots, Camelry or Infantry with the Dismountable characteristic may choose the No Camp option.

Where **allies** are allowed, they must conform to the following rules:

1. An ally must be a minimum of 2 and a maximum of 4 UGs.
2. They must take enough UGs to get them to at least 50% of the minimums in the list being used.
3. They can thereafter take any troops up to the maximum to create the rest of the allied contingent.
4. Unless specified in the notes, the general must be the same type as the army commander in their own army's list but cannot be legendary.

Usually this results in 1-3 UGs being compulsory and you having full flexibility on the rest.

Where an **internal ally** is allowed, and no contingent is specified they must conform to the following rules:

1. Each internal ally must be a minimum of 2 and a maximum of 4 UGs.
2. The total number of troops taken of each type in the entire army must not exceed the maxima for that troop type.
3. They must take enough UGs to get them to at least 50% of the minimums in the list if there is enough allowance for a UG after the core army itself has taken the minimum. For example: An army has 4-12 cavalry (UG size 4,6) and 18-32 spearmen (UG size 6,8,9) as compulsory troops with 2 internal allies. The core army must take 4 cavalry and at least 18 spearmen. The first ally must take 4 cavalry and at least 9 spearmen. The second ally must take 4 cavalry but cannot take the 9 spearmen as this would exceed the 32 spearmen limit for the army.

4. If a list requires a proportion of a troop type to be upgraded or regraded, then the army as a whole must comply with this requirement. Internal allies do not have to comply these requirements. For example: $\frac{1}{4}$ to $\frac{3}{4}$ of Turcomans must be upgraded from Experienced to Skilled shooting. An internal ally might have all Experienced as long as the army as a whole has $\frac{1}{4}$ to $\frac{3}{4}$ Skilled.
5. They can thereafter take any troops up to the maximum to create the rest of the allied contingent.

Usually this results in 1-3 UGs being compulsory and you having full flexibility on the rest.

As a courtesy to your opponent when you deploy your troops, you should describe each UG fully; type, training, quality, protection, melee weaponry, shooting skill and weaponry and characteristics. You should also explain how any unusual troop types in your army function and any special rules including Stakes, Caltrops, Barricades and Obstacles and troop types such as Battle Wagons.

The easiest way to calculate points is to use the downloadable on-line army builder at www.mortem-et-gloriam.co.uk. Use this and all you do is use drop downs for the troop classifications and it does all the work for you. For those who prefer pen and paper, or who want to doodle some approximate designs before loading an army up, we have provided the points values with the lists. If a discrepancy exists in the points values between these lists and the army builder, then the army builder has the correct value.

FRIENDLY AND SCENARIO GAMES

Feel free to vary the troop classifications for friendly and scenario games. An interesting aspect of scenario games can be to see what the effect is from representing troops in a different manner.

HISTORICAL INTRODUCTION

The Xia dynasty is the first Chinese dynasty to be described in ancient historical records. The first documentary reference to the Xia dates from over 1,000 years later in records of the Zhou dynasty. The existence of the Xia remains unproven. Archaeology has identified the Erlitou culture, named after a site discovered at Erlitou in Henan province. According to Zhou records, the dynasty ended around 1600 BC because of the Battle of Mingtiao, resulting in a Shang victory and the Duke of Shang being elevated to the throne of China.

The Shang dynasty ruled until 1046 BCE. The earliest written record of Chinese history dates from this period in the form of “oracle bones”, inscriptions of divination records. The capital appears to have moved at least nine times. The final move was to Yin (in Henan province). Archaeology suggests the Shang may have been one of many states that co-existed at this time.

The Shang were overthrown by the Zhou at the battle of Muye. King Wu of Zhou led the Zhou in a revolt. According to the legend Di Xin of the Shang had been a good ruler but after he married he became a ruthless ruler. The population supported the revolt s Di Zin had to arm slaves to protect the capital. This resulted in Shang troops refusing to fight or even joining the Zhou. Despite this it was a hard-fought battle.

China was nominally ruled by the Zhou dynasty from 1046 to 256 BCE. The first phase, known as the Western Zhou, lasted until 771 BCE. To legitimise their rule, the Zhou established the concept of the Mandate of Heaven. The Zhou also introduced the fengjian system creating “four categories of people”, shi (knightly scholars), gong (artisans), nong (peasant farmers) and shang (merchants and traders). A system of peerage was also developed, which from highest to lowest were: gōng (duke), hóu (marquis), bó (count or earl), zi (viscount) and nán (baron).

Throughout the early history of China, the established states were threatened by yi (barbarians). In the Chinese view of the world, these barbarians are described by points of the compass: Dongyi (east), Nanman (south), Xirong (west) and Beidi (north). In reality the tribal groupings appear to have been much more complex. The earliest records date from the Late Shang period and barbarian peoples are regarded as a source of slaves. The Shang kings Wu Ding (c. 1200 BCE) and Di Xin (1075 to 1046 BCE) both launched military expeditions against Yifang (barbarian lands). Early kings were certainly prepared to recruit barbarians as allies.

The Eastern Zhou period is so named after the capital was moved from Haojing to Luoyi in 771 BCE. It consists of two phases, the Spring and Autumn period and the Warring States period. The first period's name derives from the Spring and Autumn Annals, a chronicle of the state of Lu between 722 and 479 BCE, which tradition associates with Confucius.

During this period, the Zhou royal authority over the various feudal states started to decline, as more and more dukes and marquesses obtained de facto regional autonomy, defying the king's court in Luoyi, and waging wars amongst themselves. The gradual Partition of Jin, one of the most powerful states, marked the end of the Spring and Autumn period, and the beginning of the Warring States period.

The period from 685 to 591 BCE is known as the Five Hegemons. During this time leading nobles were given or tried to claim the title of bà (hegemon). These were Qi (685 to 643 BCE), Song (643 to 637 BCE), Jin (636 to 628 BCE), Qin (628 to 621 BCE) and Chu (613 to 591 BCE).

During the Spring and Autumn period the records show that plenty of campaigns were fought against barbarian groups. The Red Di were a particularly active group between 662 and 659 BCE, nearly destroying the state of Xing which had to be rescued by the Qi and then taking the capital of Wei. The Jin eventually subjugated the Red Di state of Lushi in 541 BCE.

CHINESE NAMES AND TERMS

There are currently two systems for the transliteration of Chinese into English, the Wade-Giles system and the Pinyin system. Pinyin is the newer system and has been adopted in these army lists. Many works however use Wade-Giles and the following table lists the transliteration of names and terms used in these lists.

Pinyin	Wade-Giles
Di	Ti
Jin	Chin/Ts'in
Qiang	Ch'inag
Qin	Ch'in
Xianbei	Hsien-pei
Xiongnu	Hsiung-nu

MAXIMUS ARMY LISTS

CALCULATING POINTS

Army points are calculated as follows:

GENERALS - MAXIMUS

Type of general	Army Commander		Sub-general		Ally general	
	Professional	Instinctive	Professional	Instinctive	Professional	Instinctive
Legendary	1600	1400	n/a	n/a	800	700
Talented	1100	900	850	700	650	600
Competent	700	550	600	450	300	250
Mediocre	250	0	400	250	100	50

CAMPS

Type of camp	Poor	Average	Superior
Unfortified	108	180	252
Fortified	216	360	504
Flexible	180	300	420
Mobile	126	210	294
No camp	378	N/A	N/A

A flexible camp is deployed as a fortified camp when defending and a mobile camp when invading.
No camp deploys a poor mobile camp when defending and no camp at all when invading.

UGs

For each UG multiply the cost shown in the list (adjusting for any optional characteristics) by the number of bases.

NOTES

1. Points values for skirmishers in Magna and Pacto are greater than in Maximus as SuGs shoot at full effect with only two ranks.
2. For further details on how points are calculated visit the Mortem et Gloriam website.

ERLITOU CHINESE

1700 TO 1301 BCE

HISTORICAL NOTES

This list covers the semi-mythical Xia Dynasty and the early part of the Shang Dynasty before the adoption of the chariot.

TROOP NOTES

The army appears to have consisted of tsu and lu troops. Tso were military units consisting of nobles and their followers. They were raised for specific campaigns. Lu were levies who formed a standing army.

Archery was the prestige arm. The Shang dagger-axe (ge) had a dagger-like blade on a one-metre shaft.

HISTORICAL ENEMIES

CHANGES FROM LAST VERSION									
None.									

CHINESE NORTHERN BARBARIANS

1700 TO 500 BCE

HISTORICAL NOTES

This list includes the various tribal peoples of China, referred to by the Chinese as Yi. The Chinese classified their neighbours by compass direction. The Beidi (Northern Di) were northern barbarians who seem to have lived in a horizontal band from the upper Ordos Loop and across northern Shanxi to the state of Yan north of Beijing. The Chidi (Red Di) lived to the east. They seem to have been more warlike.

TROOP NOTES

The Chinese tribes mostly, if not all, fought as infantry. There is a little evidence for chariots in a Western Chou inscription and Mongolian rock carvings. The infantry were equipped with a small shield and either a weak sword, short spear or javelin.

ALLIES	LIST
Xing allies - The Five Hegemons (Red Di in 640 BCE)	4107

CHANGES FROM LAST VERSION
None.

LATER SHANG CHINESE

1300 TO 1017 BCE

HISTORICAL NOTES

This list covers the Shang Dynasty from the introduction of the chariot. The Shang were the first truly historical Chinese dynasty. The last Shang king was defeated and killed by the Zhou in 1046 BCE, but his heir was retained as a Zhou vassal and allied with Zhou rebels in a revolt from 1042 to 1039 BCE.

TROOP NOTES

The chariot was probably introduced by Aryan invaders from the west. Close-fighting infantry were armed with the short one-handed "ko" dagger-axe (which is the commonest weapon in graves) or a 5-foot long spear. Shields were relatively flimsy constructions of wicker and hide and of moderate size. Slaves conscripted as shock-troops by the last Shang king either did not fight or quickly defected.

HISTORICAL ENEMIES

Chinese Northern Barbarians 4102; Later Shang Chinese 4103; Chinese Nomadic Barbarians 4104; Early Zhou Chinese 4105.

CHINESE NOMADIC BARBARIANS

1300 TO 314 BCE

HISTORICAL NOTES

Rong is a general term for nomadic tribes of the north-western territories, or the western tribes of the "four barbarians", roaming the area of modern Shaanxi, Gansu, Ningxia. The Rong were therefore also known as the Western Rong. Traditionally the oldest known people of the northwest, the Hunyu are said to be ancestors of the Rong. During the Spring and Autumn period (8th to 5th centuries BCE) the mightiest tribes of the Rong were Yun Rong, Jiang Rong, and Quan Rong. Chinese scholars think that the Yun Rong were descendants of the Xianyun that had at the end of the Western Zhou period (c. 770 BCE) conquered the capital of the Zhou empire, Zongzhou near modern Xi'an, Shaanxi. They caused the flight of the Zhou dynasty to the east, and thereby initiated the Eastern Zhou period (770 to 221 BCE) during which the royal house was critically weakened against the feudal lords.

The Yun Rong lived in the regions of modern Shaanxi, Ningxia and Gansu and regularly plundered Chinese border villages. King Xuan of the Zhou was the first to undertake a military expedition to pacify the belligerent Rong tribes. In the early Spring and Autumn period a lot of Rong and Di people migrated to the east and came as far as Weirui and Huanyuan (modern Yanshi, Henan), and moved into the Han River valley.

TROOP NOTES

The nomads developed horse archery. There is some evidence to suggest that the earliest nomads may have used chariots.

EARLY ZHOU CHINESE

1122 TO 722 BCE

HISTORICAL NOTES

The Zhou dynasty followed the Shang dynasty. The military control of China by the royal house (Ji) lasted from around 1046 until 771 BCE. The Zhou kings enfeoffed their fellow warriors and relatives created large domains of land. Individuals were assigned as rulers of these domains. This decentralised system contributed to the longevity of the Zhou dynasty which survived to be replaced by the Qin dynasty. Over time, this decentralized system became strained as the familial relationships between the Zhou kings and the regional dynasties weakened. In 771 BCE the Marquis of Shen joined with Zeng and the Quanrong barbarians to sack the capital Hao. The capital was moved eastward to Wangcheng, marking the transition from "Western Zhou" to "Eastern Zhou". The Eastern Zhou was characterized by an accelerating collapse of royal authority, although the king's ritual importance allowed over five more centuries of rule.

TROOP NOTES

The early Western Zhou supported a strong army, split into two major units: "the Six Armies of the West" and "the Eight Armies of Chengzhou". Although chariots had been introduced to China during the Shang dynasty from Central Asia, the Zhou period saw the first major use of chariots in battle. The heavy 4 horse chariot is a replacement for the lighter 2 horse variety. The Sima Fa does indicate that the Shang ‘chariots for the new moon’ put speed first, but Zhou chariots the ‘source of their weapons” put excellence first. The dagger=axe gained a longer shaft up to 3 metres in length.

EARLY SPRING AND AUTUMN CHINESE

771 TO 685 BCE

HISTORICAL NOTES

After the Zhou capital was sacked, the Zhou moved the capital east to Chengzhou in the Yellow River Valley. The Zhou royalty was then closer to its main supporters, particularly the Jin, and Zheng. The Zhou royal family had much weaker authority and relied on lords from these vassal states for protection and for resolution of internal power struggles. The Zhou court would never regain its original authority and was relegated to being merely a figurehead of the feudal states. Though the king retained the Mandate of Heaven, the title held little actual power.

Duke Yin of Lu ascended the throne in 722 BCE. From this year on the state of Lu kept an official chronicle, the Spring and Autumn Annals, which along with its commentaries is the standard source for the Spring and Autumn period. Corresponding chronicles are known to have existed in other states as well, but all but the Lu chronicle have been lost. In 717 BCE, Duke Zhuang of Zheng went to the capital for an audience with King Huan. During the encounter the duke felt he was not treated with the respect and etiquette which would have been appropriate, given that Zheng was now the chief protector of the capital. In 715 BCE Zheng also became involved in a border dispute with Lu regarding the Fields of Xu. The fields had been put in the care of Lu by the king for the exclusive purpose of producing royal sacrifices for the sacred Mount Tai. Zheng regarding the fields as just any other piece of land was an insult to the court.

By 707 BCE, relations had soured enough that the king launched a punitive expedition against Zheng. The duke counter-attacked and raided Zhou territory, defeating the royal forces in The Battle of Xuge and injuring the king himself. Zheng was the first vassal to openly defy the king, initiating centuries of warfare without respect for titles which would characterise the period.

TROOP NOTES

Chariots remained the prestige arm and used in increased numbers compared to earlier times. Due to improved logistics armies could include larger numbers of infantry.

The dagger-axe and composite bow remained the primary weapons used by the infantry.

According to the accounts of Sima Qian and Bao Si, in 771 BCE the rebel states of Shen and Zeng allied with Quanrong barbarians to defeat King You of Zhou.

THE FIVE HEGEMONS

685 TO 591 BCE

HISTORICAL NOTES

The first hegemon was that of Duke Huan of Qi (685–643 BCE). With the help of his prime minister, Guan Zhong, he reformed Qi to centralize its power structure. The state consisted of 15 "townships" with the duke and two senior ministers each in charge of five. Military functions were united with civil ones. Duke Huan intervened in a power struggle in Lu. He protected Yan from encroaching Western Rong nomads (664 BCE). He drove off Northern Di nomads after they'd invaded Wey (660 BCE) and Xing (659 BCE). He provided the people with provisions and protective garrison units. He led an alliance of eight states to conquer Cai and thereby block the northward expansion of Chu (656 BCE). At his death in 643 BCE, five of Duke Huan's sons contended for the throne, badly weakening the state so that it was no longer regarded as the hegemon. For nearly ten years, no ruler held the title.

Duke Xiang of Song attempted to claim the hegemony in the wake of Qi's decline, perhaps driven by a desire to restore the Shang Dynasty from which Song had descended. He hosted peace conferences in the same style as Qi had done and conducted aggressive military campaigns against his rivals. Duke Xiang met his end when, against the advice of his staff, he attacked the much larger state of Chu. The Song forces were defeated at the battle of Hong in 638 BCE, and the duke himself died in the following year from an injury sustained in the battle.

When Duke Wen of Jin came to power in 636 BCE, he capitalized on the reforms of his father, Duke Xian, who had centralized the state, killed off relatives who might threaten his authority, conquered sixteen smaller states, and even absorbed some Rong and Di peoples to make Jin much more powerful than it had been previously. When he assisted King Xiang in a succession struggle in 635 BCE, Xiang awarded Jin with strategically valuable territory near Chengzhou. He then used his growing power to coordinate a military response with Qi, Qin, and Song against Chu, which had begun encroaching northward after the death of Duke Huán of Qi. With a decisive Chu loss at the Battle of Chengpu (632 BCE), Duke Wen's loyalty to the Zhou king was rewarded.

Duke Mu of Qin had ascended the throne in 659 BCE and forged an alliance with Jin by marrying his daughter to Duke Wen. In 624 BCE, he established hegemony over the western Rong barbarians and became the most powerful lord of the time. However, he did not chair any alliance with other states nor was he officially recognized as hegemon by the king. King Zhuang of Chu expanded the borders of Chu well north of the Yangtze River, threatening the central states in modern Henan. At one point the Chu forces advanced to just outside the royal capital of Zhou. In the end the Zhou capital was spared, and Chu shifted focus to harassing the nearby state of Zheng. The once-hegemon state of Jin intervened to rescue Zheng from the Chu invaders but were resolutely defeated, which marks the ascension of Chu as the dominant state of the time. King Zhuang's self-proclaimed title of "king" was never recognized by the Zhou states. In the Spring and Autumn Annals he is defiantly referred to by the Chu ruler's original title "viscount" (the second-lowest noble rank), even at a time when he dominated most of south China.

TROOP NOTES

The trends of the earlier period continued with armies increasing in size.

None.

LATE SPRING AND AUTUMN CHINESE

591 TO 475 BCE

HISTORICAL NOTES

Eventually the dukes of Lu, Jin, Zheng, Wey and Qi would all become figureheads to powerful aristocratic families. In the case of Jin, the shift happened in 588 BCE when the army was split into six independent divisions, each dominated by a separate noble family: the Zhao, Wei, Han, Fan, Zhi and Zhongxing. The heads of the six families were conferred the titles of viscounts and made ministers, each heading one of the six departments of Zhou Dynasty government. From this point on, historians refer to "The Six Ministers" as the true power brokers of Jin. The same happened to Lu in 562 BCE, when the Three Huan divided the army into three parts and established their own separate spheres of influence. The heads of the three families were always among the department heads of Lu.

TROOP NOTES

This period started to see the transformation of warfare from armies led by aristocrats into warfare conducted by the state.
